BLUEPRINT3D LTD - MAGENTO 2 MODULE

Change Order Email

Install and usage guide. Lets store staff correct the customer email address on an existing order directly from the order view page - no database access required.

PACKAGE	MODULE	REQUIRES	LICENSE
blueprint3d/module-change-order-email	BluePrint3D_ChangeOrderEmail	Magento 2.4.x | PHP 8.1-8.5	Proprietary EULA

1 What it does

Customers regularly place orders with a mistyped email address, and out of the box Magento gives admins no safe way to fix it. The email on an order is tied to the customer record it was placed under, so a naive edit can silently detach the order from its account or collide with an email already used by someone else.

This module adds an **Edit Order Email** button to the admin order view page. Submitting a new address updates the order - and the customer account, if the order belongs to one - safely:

- If the new email is unused, or already belongs to the same customer, the order and the customer record are updated immediately. Only the order you are editing changes - the customer's other orders keep their existing email.
- If the new email already belongs to a *different* customer, the admin is asked to confirm before the order is moved to that customer's account.
- Guest orders are updated in place with no customer account changes.

AUDIT TRAIL Every change is recorded as a comment in the order's status history, noting the old and new email and which admin user made the change. When an order is moved to another customer, the note also records both customer IDs.

2 Installation

1 Install via Composer

```
$ composer require blueprint3d/module-change-order-email
```

2 Enable the module

```
$ php bin/magento module:enable BluePrint3D_ChangeOrderEmail
```

3 Run setup upgrade

```
$ php bin/magento setup:upgrade
```

4 Compile and flush cache

```
$ php bin/magento setup:di:compile
$ php bin/magento cache:flush
```

3 Using it

1. **Open the order**

   Go to **Sales > Orders** and open any order.

2. **Click Edit Order Email**

   The button sits in the page header, next to the other order actions.

3. **Enter and confirm the new address**

   Type the corrected email twice to guard against typos.

4. **Confirm if prompted**

   Only shown when the new address already belongs to a different customer account - confirms you want to move the order to that account.

5. **Submit**

   The order, and the customer record where applicable, update immediately.

KEPT IN SYNC The email column in the sales order grid is updated at the same time, so grid searches and exports stay accurate.
